Ideation Phase
Brainstorm & Idea Prioritization Template

Date	3 October 2026
Team ID	SWTID-2026-9684
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Session goal	Generate as many ideas as possible to make Incident records complete, consistent and valid before they are submitted.
Selected problem statement	How might we enforce conditional field behaviour and save-time validation on the Incident form so that High-impact Incidents are never submitted with missing or inconsistent data? (PS-1 and PS-2)
Brainstorming rules	• Stay in topic • Encourage wild ideas • Defer judgment • Listen to others and build on their ideas • Go for volume over value • If possible, be visual

Step-2: Brainstorm, Idea Listing and Grouping

Group	Ideas listed
UI Policy: field behaviour	• Make Assignment group mandatory when Impact = High • Make Urgency read-only when Impact = High • Use “Reverse if false” so fields return to normal when Impact changes • Hide fields that are not needed for low-impact Incidents
Client Script: automation (onChange)	• Auto-set Urgency to High when Impact is set to High • Show an info message so the user knows Urgency was updated
Client Script: save validation (onSubmit)	• Block save when Impact is High and Assigned To is empty • Show the error message directly on the Assigned To field
Client Script: list control (onCellEdit)	• Block State changes made directly from the list view • Alert the user to open the Incident form to update State
Testing and other ideas	• Test mandatory enforcement, successful save, reverse condition, list-edit blocking and form-based update • Data Policy for server-side enforcement • Business Rule for automatic assignment • Require resolution notes when State is Resolved

Step-3: Idea Prioritization

Ideas were rated on Importance (impact on data quality and SLA compliance) and Feasibility (effort to build using ServiceNow client-side features). Ideas that are both highly important and highly feasible were selected for this project.

Idea	Importance	Feasibility	Decision
Make Assignment group mandatory (UI Policy)	High	High	**Selected**
Make Urgency read-only (UI Policy Action)	High	High	**Selected**
Auto-set Urgency on Impact change (onChange)	High	High	**Selected**
Block save without Assigned To (onSubmit)	High	High	**Selected**
Block State edits from list (onCellEdit)	High	High	**Selected**
Require resolution notes on Resolved	Medium	High	Future enhancement
Data Policy (server-side enforcement)	High	Medium	Out of scope (client-side project)
Business Rule for auto-assignment	Medium	Medium	Out of scope
Hide non-essential fields for low impact	Low	High	Not prioritized
