Ideation Phase
Empathize & Discover

Date	3 October 2026
Team ID	SWTID-2026-9684
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to helps teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Example: Incident Data Validation in ServiceNow

What does the user THINK and FEEL?

- Will this High-impact incident reach the right team?
- Worried about missing SLA targets because of incomplete fields
- Anxious that inconsistent data will hurt reports and audits
- Wants the form to guide them instead of relying on memory

What does the user HEAR?	Service Desk Agent / Incident Manager *(ServiceNow user)*	What does the user SEE?
• Managers: "The SLA report numbers do not match" • Resolver teams: "Tickets arrive without an assignee" • Colleagues: "Remember to fill the Assignment group"		• Incidents saved with Assigned To or Assignment group empty • Urgency that does not match the Impact • State changed directly from the list view • Dashboards with incomplete or inconsistent data

What does the user SAY and DO?

- Manually checks every field before saving the incident
- Re-opens saved incidents to correct missed values
- Sets Urgency by hand after choosing Impact
- Reminds teammates in chat to complete mandatory data
- Edits State from the list view to save time

Pain	Gain
• Incomplete or inconsistent incident data • Manual checks are slow and error-prone • Rework and delayed routing of incidents • Risk of SLA breach and poor reporting accuracy	• Assignment group made mandatory automatically for High impact • Urgency auto-set and locked for consistency • Save blocked until Assigned To is filled • State changes only through the Incident form • Clean, reliable data for triage and reports
