Project Design Phase-II

Customer Journey Map – ServiceNow Incident Controls

Journey of a ServiceNow user creating and updating an Incident under the configured UI Policies and Client Scripts.

Stage	User Action	System Response	Expected Outcome
1. Create Incident	Open Incident → Create New	Incident form is displayed.	User can begin entering Incident details.
2. Select Impact	Set Impact to High	High Impact Control is triggered; Assigned To becomes mandatory and Urgency is controlled.	High-impact rules are activated.
3. Urgency Update	Continue with Impact = High	onChange Client Script sets Urgency to High and shows an information message.	Urgency is automatically set correctly.
4. Save Validation	Leave Assigned To empty and click Submit	onSubmit Client Script blocks the save and shows an error.	Incomplete High impact Incident is not saved.
5. Complete Assignment	Select a value in Assigned To and click Submit	Validation condition is satisfied and the Incident can be saved.	Incident saves successfully.
6. Change Impact	Change Impact from High to Medium	Reverse if false removes the mandatory condition; Urgency field becomes editable.	Normal behavior is restored.
7. List Edit	Double-click State in Incident list	onCellEdit shows an alert and callback(false) blocks the edit.	State remains unchanged from list editing.
8. Form Update	Open Incident and change State from form	Form-based update is permitted and can be saved.	State change is saved successfully.
