Project Design Phase-II
Data Flow Diagram & User Stories

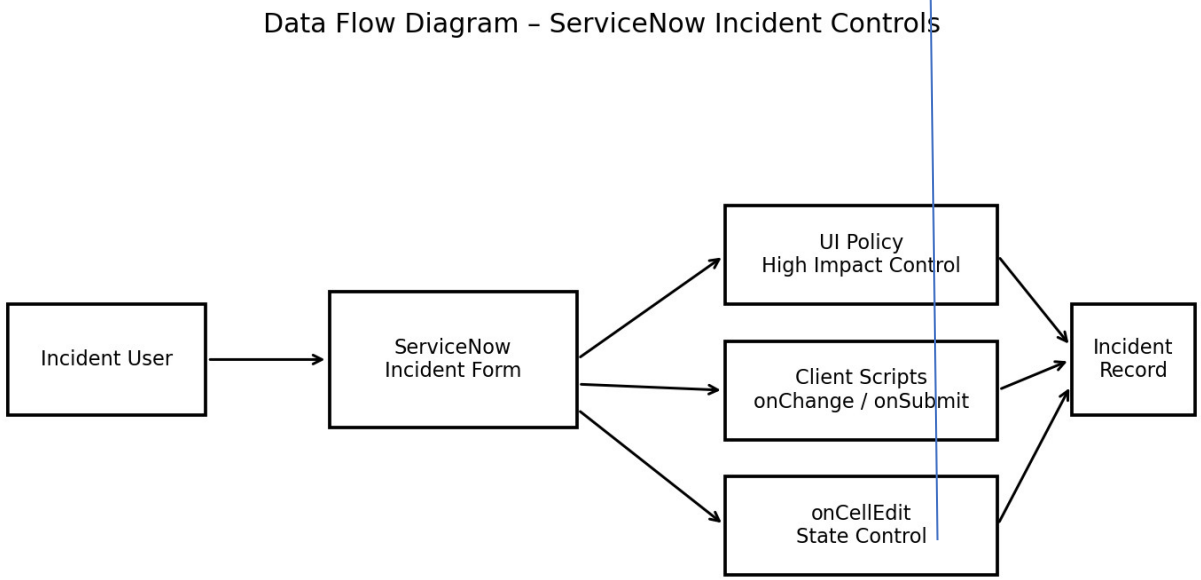

Date	3 October 2026
Team ID	SWTID-2026-9684
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Data Flow Diagrams:

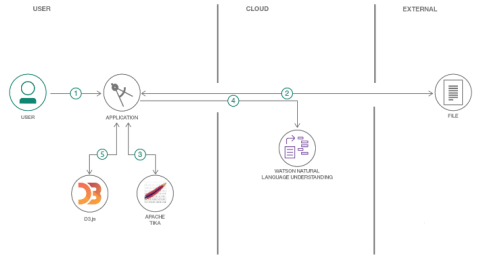

A Data Flow Diagram (DFD) represents how Incident data moves through the ServiceNow form, UI Policy controls, Client Scripts, and the Incident record.

Example: DFD Level 0 (Industry Standard)

DFD for the proposed solution:

Flow

1. User configures credentials for the Watson Natural Language Understanding service and starts the app.
2. User selects data file to process and load.
3. Apache Tika extracts text from the data file.
4. Extracted text is passed to Watson NLU for enrichment.
5. Enriched data is visualized in the UI using the D3.js library.

User Stories

Use the below template to list the user stories for the ServiceNow Incident solution.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
ServiceNow User	High Impact Control	USN-1	As a ServiceNow user, I can select Impact as High so that the High Impact Control UI Policy is triggered.	Impact = High activates the configured UI Policy.	High	Release-1
ServiceNow User	Mandatory Assignment	USN-2	As a ServiceNow user, I must enter Assigned To for a High impact Incident.	Assigned To becomes mandatory when Impact = High.	High	Release-1
ServiceNow User	Urgency Automation	USN-3	As a ServiceNow user, I want Urgency to be automatically set to High when Impact becomes High.	Urgency is set to High and an information message is displayed.	High	Release-1
ServiceNow User	Urgency Control	USN-4	As a ServiceNow user, I cannot manually change Urgency while the High Impact UI Policy is active.	Urgency becomes read-only for High impact.	Medium	Release-1
ServiceNow User	Save Validation	USN-5	As a ServiceNow user, I cannot save a High impact Incident when Assigned To is empty.	Save is blocked and an error is displayed for Assigned To.	High	Release-1
ServiceNow User	List Edit Control	USN-6	As a ServiceNow user, I cannot change State directly using Incident list editing.	An alert appears and the State value remains unchanged.	High	Release-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
ServiceNow User	Form Update	USN-7	As a ServiceNow user, I can change State from the Incident form.	The State change is saved successfully through the form.	Medium	Release-1
ServiceNow Admin	Reverse Condition	USN-8	As an administrator, I can verify that controls are reversed when Impact changes from High to Medium.	Assigned To is no longer mandatory and Urgency becomes editable.	Medium	Release-1
ServiceNow Admin	Testing	USN-9	As an administrator, I can test all configured UI Policy and Client Script behaviors.	Mandatory, successful save, reverse condition, list blocking, and form update tests pass.	High	Release-1
