Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	3 October 2026
Team ID	SWTID-2026-9684
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed ServiceNow Incident solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	High Impact UI Control	Apply UI Policy when Impact = 1 – High; make Assigned To mandatory; reverse the behavior when the condition is false.
FR-2	Urgency Control	When Impact changes to High, automatically set Urgency to High and make Urgency read-only while the high-impact condition is active.
FR-3	Save Validation	On Incident submission, prevent saving when Impact is High and Assigned To is empty; display an error message.
FR-4	List Edit Control	Prevent direct State changes through Incident list editing and allow State changes from the Incident form.
FR-5	Configuration Testing	Verify mandatory enforcement, successful save, reverse condition, list-edit blocking, and form-based State update.
FR-6	Incident Data Integrity	Ensure Incident records contain complete and consistent information before submission.

Non-functional Requirements:

Following are the non-functional requirements of the proposed ServiceNow Incident solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Field behavior and validation should be clear to users through mandatory indicators, read-only controls, and messages.
NFR-2	Security / Control	Client-side controls should restrict unauthorized list editing and prevent incomplete high-impact Incident submission.
NFR-3	Reliability	Configured UI Policies and Client Scripts should consistently apply the defined Incident business rules.
NFR-4	Performance	Client-side validation and field updates should execute quickly without unnecessary processing.
NFR-5	Maintainability	Each policy/script should have a clear purpose and be separated by event type: onChange, onSubmit, and onCellEdit.
NFR-6	Data Quality	Incident records should maintain complete, consistent, and valid values required by the defined rules.
