Project Design Phase-II
Technology Stack (Architecture & Stack)

Date	3 October 2026
Team ID	SWTID-2026-9684
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	4 Marks

Technical Architecture:

The solution uses ServiceNow client-side configuration to control Incident form behavior and validation.

Technical Architecture – ServiceNow Incident Controls

Guidelines:

- Include all the processes (As an application logic / Technology Block)
- Provide infrastructural demarcation (Local / Cloud)

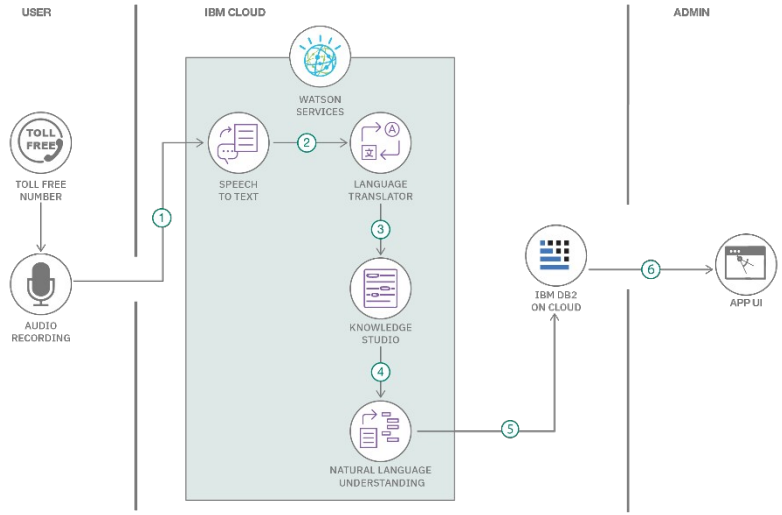

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1	User Interface	Incident form and Incident list used by ServiceNow users.	ServiceNow Incident Form / List UI
2	UI Policy	Applies conditional field behavior when Impact is High.	ServiceNow UI Policy / UI Policy Actions
3	Client Logic – onChange	Automatically sets Urgency to High when Impact changes to High.	ServiceNow Client Script / GlideForm (g_form)
4	Client Logic – onSubmit	Validates Assigned To before saving a High impact Incident.	ServiceNow Client Script / GlideForm
5	Client Logic – onCellEdit	Blocks direct State changes from list editing.	ServiceNow Client Script / onCellEdit
6	Data Layer	Stores Incident fields and configuration records.	ServiceNow Platform / Incident Table
7	Testing & Validation	Verifies mandatory behavior, successful save, reverse condition, list blocking and form update.	ServiceNow Incident test cases
1.	External API-1	Purpose of External API used in the application	IBM Weather API, etc.

2.	External API-2	Purpose of External API used in the application	Aadhar API, etc.
3.	Machine Learning Model	Purpose of Machine Learning Model	Object Recognition Model, etc.
4.	Infrastructure (Server / Cloud)	Application Deployment on Local System / Cloud Local Server Configuration: Cloud Server Configuration :	Local, Cloud Foundry, Kubernetes, etc.

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1	Open-Source / Platform Frameworks	Uses ServiceNow platform configuration and client-side scripting for the project.	ServiceNow UI Policy, Client Scripts, JavaScript
2	Security Implementations	Restricts invalid submission and unauthorized direct State list edits through client-side controls.	UI Policy, Client Script validation
3	Scalable Architecture	Business rules are separated into reusable UI Policy and event-based Client Scripts.	ServiceNow platform configuration
4	Availability	The solution runs within the ServiceNow platform and applies controls on Incident interactions.	ServiceNow platform
5	Maintainability	Each control has a clear name, event type, field target, and test scenario.	ServiceNow configuration records
