Project Design Phase

Problem – Solution Fit Template

The Problem-Solution Fit identifies the Incident-management problem and shows how the proposed ServiceNow controls address it.

Purpose:

• Solve data-entry and validation problems on Incident records using interface-level controls.

• Improve solution adoption by applying rules directly where users create and edit Incidents.

• Reduce incomplete or inconsistent Incident submissions through mandatory fields and validation.

• Improve consistency by automatically setting and controlling relevant field values.

• Understand the existing Incident-entry situation in order to improve the user workflow.

Date	3 October 2026
Team ID	SWTID-2026-9684
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks

Problem-Solution Fit Area	Project-specific content
1. Customer Segment(s)	ServiceNow Incident users and support/IT service personnel who create, update, or manage Incident records.
2. Jobs-to-be-Done / Problems	Create and update Incident records with complete and valid information; prevent missing Assigned To information for High Impact incidents; control changes to key fields.
3. Triggers	An Incident Impact value is changed to High; a user attempts to save a High Impact Incident without Assigned To; a user attempts to edit State directly from an Incident list.
4. Emotions: Before / After	Before: users may face unclear or inconsistent field requirements. After: the form gives controlled behavior, validation messages, and automatic field updates.

5. Available Solutions	Manual checking by users, form-level UI Policies, Client Scripts, and controlled list/form editing. This project combines UI Policies and Client Scripts.
6. Customer Constraints	The solution operates within ServiceNow Incident forms, list editing behavior, configured fields, and the rules defined by the project.
7. Behaviour	Users create or edit Incidents, select Impact, enter Assigned To, save records, and may attempt list editing of State.
8. Channels of Behaviour	Online: ServiceNow Incident form and Incident list. Offline: not defined by the project.
9. Problem Root Cause	Reliance on user awareness and manual checks can allow incomplete, inconsistent, or incorrect Incident data to be submitted.
10. Your Solution	A High Impact UI Policy and UI Policy Actions, plus onChange, onSubmit, and onCellEdit Client Scripts, enforce mandatory fields, control Urgency, validate saving, and block direct State list edits.
