Project Design Phase

Proposed Solution Template

Project Name

Implement Client Script & UI Policy (Incident)

Problem Statement

Incident records may contain incomplete, inconsistent, or incorrect information when manual checks are relied upon.

Idea / Solution description

Use ServiceNow UI Policies and Client Scripts to control Incident fields, automate Urgency, validate Assigned To, and block direct State list edits.

Novelty / Uniqueness

Combines UI Policy Actions with onChange, onSubmit, and onCellEdit client-side controls.

Social Impact / Customer Satisfaction

Supports consistent Incident data entry and controlled user interaction.

Business Model (Revenue Model)

No direct revenue model is defined; the project provides operational value through improved data quality and process control.

Scalability

Rules can be extended to other Incident fields and business conditions.
