Project Design Phase

Solution Architecture

Solution architecture bridges the business problem and the technology solution. For this project, the architecture uses ServiceNow Incident form controls to enforce business rules at the client interface.

Goals for this solution:

• Control Incident field behavior according to Impact.

• Automatically update Urgency when Impact is High.

• Validate required information before an Incident is saved.

• Prevent unauthorized State changes through direct list editing.

• Provide a lightweight configuration suitable for a micro project.

Date	3 October 2026
Team ID	SWTID-2026-9684
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	2 Marks
