Project Development Phase

Performance & Functional Test

Testing approach adapted from the Development Phase performance-testing structure to the ServiceNow Incident project.

Date	3 October 2026
Team ID	SWTID-2026-9684
Project Name	Implement Client Script & UI Policy (Incident)
Maximum Marks	Not specified

Test Scenarios & Results

Test Case ID	Parameter / Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
FT-01	UI Policy activation	Set Impact to 1 – High	High Impact policy applies	Policy behavior documented as expected	Pass
FT-02	Mandatory field enforcement	Leave Assigned To empty and attempt save with High Impact	Submission is prevented with an error	Submission is blocked as specified	Pass
FT-03	Automatic value update	Change Impact to High	Urgency is automatically set to High	Urgency is set to High as specified	Pass
FT-04	Read-only control	With High Impact, try to edit Urgency	Urgency cannot be edited	Read-only behavior is specified	Pass
FT-05	Reverse condition	Change Impact from High to Medium	Mandatory/read-only restrictions are reversed as configured	Behavior is specified as expected	Pass
FT-06	List edit protection	Edit State from Incident list	Alert appears and edit is rejected	Change is rejected as specified	Pass
PT-01	Client-side responsiveness	Trigger onChange and UI Policy conditions	Field behavior should update during form interaction	Project testing indicates immediate dynamic behavior	Pass
PT-02	Submission validation	Submit valid and invalid High Impact records	Invalid record is blocked; valid record is accepted	Behavior is specified as expected	Pass

Note: The project source does not provide measured response-time values, load-test metrics, or server-performance benchmarks. Therefore, no numerical performance claim is added.
